

Course Description

With MEGA Publisher, documentation of MEGA repository objects can be fully adapted to your company's internal and external communication strategies. In this course you learn how to use the powerful features of MEGA Publisher to customize Document and Web publication.

- Document publication: integrate your own company templates and fine-tune document deliverables through complete control of which repository objects to include, which characteristics of those objects to portray, and specification of document presentation, structure, styles, and formats.
- Web publication: create and generate customized portals for your company. The generated portal is more than just a collection of HTML pages: hyperlinks are automatically derived from links between repository objects or external objects. These hot links between elements provide an easy way to navigate and facilitate impact analysis in the website.

Reference

PUB 2

Length

2 days

Public

- MEGA Administrators
- MEGA Documentation Managers
- MEGA Web Site Webmasters

Prerequisites

MEGA Publisher Level 1 and knowledge of HTML

Expected benefits

- Create a new document template to meet given specifications.
